Generative AI for Project Managers

Duration – 16 Hours

Program Description

Gen AI for Project Managers equips project leaders to leverage generative AI for smarter planning, communication, risk management, and workflow automation.

The program blends AI fundamentals with agile and hybrid methodologies, advanced prompt engineering, and hands-on use of custom GPTs and agents—preparing managers for the future of AI-driven project management.

Learning Outcomes

➢ Understand the fundamentals of Generative AI and its impact on project management evolution.
➢ Apply AI tools for project planning, scheduling, and resource allocation.
➢ Enhance communication and stakeholder engagement using Gen AI solutions.
➢ Leverage AI for project monitoring, tracking, and risk management.
➢ Integrate AI into Agile and hybrid project management practices.
➢ Use advanced prompt engineering techniques tailored for project management needs.
➢ Design and deploy custom GPTs and AI agents to automate project workflows.
➢ Anticipate emerging trends and future roles of AI in project management.

Course Topics

❖ Introduction to Generative AI & Project Management Evolution
❖ Planning with AI
❖ Communication and Stakeholder Management with Gen AI
❖ AI for Monitoring, Tracking and Risk Management
❖ Gen AI in Agile & Hybrid PM Methodologies
❖ Advanced Prompt Engineering for Project Managers
❖ Custom GPTs & AI Agents for Project Automation
❖ Future of Project Management with Gen AI Duration

Modules can be customized to suit client's specific needs and duration accordingly
